3.0 INSTALLATION

- 3.1 BoilerMagXT is typically installed on the return circuit as close to the boiler as possible. On larger systems, units may be installed elsewhere to give extra protection for radiators and pipework
- 3.2 BoilerMagXT should be located in a position which gives it adequate access above to lift out the magnets during service and maintenance
- 3.3 Access is also required to the underneath of the unit to connect a hose or hold a bucket during draining
- 3.4 Isolation valves (not supplied) should be installed for cleaning and servicing to be carried out
