

Premium Protection Against Limescale

Electrolytic Scale Reducer

High performance protection against limescale deposits

- One year replacement guarantee
- Improves energy efficiency
- Easy to install
- 145 psi (10 bar) working pressure
- Zero maintenance
- No chemicals or power source required
- Robust stainless steel and copper construction. Lead free.
- 10 year service life

Why install an Electrolytic Scale Reducer?

Minimizes limescale deposition - improves boiler efficiency and lifespan

A combination of copper and zinc metals inside the unit emit charged zinc ions when water flows through it. This induces hardness salts to cluster together and therefore pass through heating appliances rather than forming limescale deposits on the heat exchanger or water heating element. This extends the lifespan of the boiler and improves heating efficiency.

Part #: **BMESR/NPT**

3/4" NPT Fitting
